DENVER IPC-1020

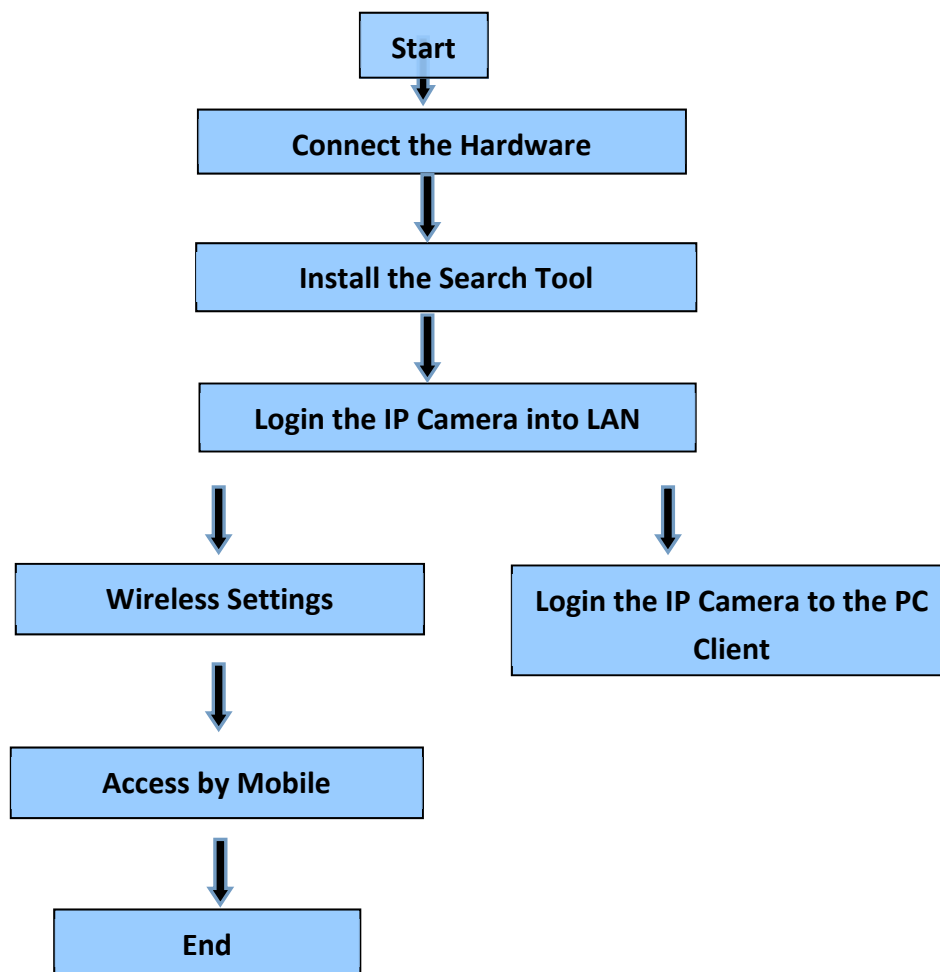

DENVER IPC-1030

Packing list:

 **Note:** Some models don't have a separate antenna.

Installation procedure:

 **Note:** For the first time use of IP Camera, please refer to the procedures above.

Connect the camera with Internet cable to the router, and with the power cord to the mains, like shown above.

1. Installation of the Search Tool

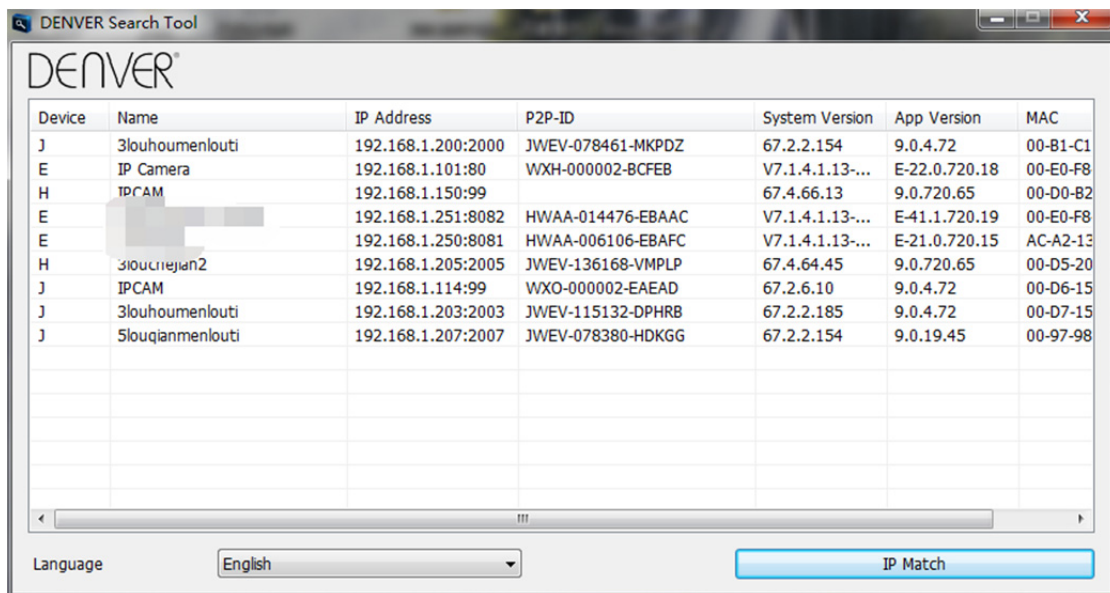

Insert the CD and install the following software:

1. Open the File "IPC-1020 & IPC-1030", click on "OCX setup" — "Next" — "Install" — "Finish"
2. Open the File "Search Tool", Copy the "Search Tool" to the desktop and launch it.

2. Login of the IP Camera into the LAN

After the hardware is connected properly, launch the search tool, and the IP address of the camera will be displayed automatically.

 **Note:** If the Search Tool issues the message "Subnet mask does not match", please click

Double click the camera IP address in the search tool.

In your default browser a login screen like shown below will be displayed:

 **Note:** Both the username and password are “admin”

(Please change the account user name and password for safety later)

After entering the correct user name and password, the **Login** screen will be displayed.
(It supports 6 visitors watching online at the same time)

 **Note:** If the OCX already has been installed you may login directly. If not, please install OCX.

- A. Click on “OCX” to download and Install it.
- B. Refresh the webpage and login again, the camera video will be displayed as below

Live video

3. Wireless Setting

1. Click on the  button to access the “Wireless” settings.
2. Search for the WIFI signals and choose the desired SSID.
3. Make sure that all parameters are the same like in your router, enter the WIFI network key.
4. After 30 seconds click on “Check”, the notification will show you if the WIFI settings are successful.
5. If correct, just go back to select “Apply”, then disconnect the network cable.

 **Note:** If the camera IP Address can not be found by the search tool, please connect the internet cable again to check the WIFI settings.

Checking the WIFI signal connection status

Checking WiFi, please wait about 30 seconds.

Connected to WiFi successfully.
Select "Apply" to save these settings.

4. Device information Setting

- 1) Click on the  icon to access the "Device information" settings
- 2) You will see all information for the IP camera

Device information	
Device ID:	IPCAM
P2P ID:	WXH-00002-BCFEB
Network Connection Status:	LAN
Current Visitors:	0
Software Version:	V7.1.4.1.13-20150521
Webware Version:	E-22.0.720.18
Mac address:	00:E0:F8:02:A4:4D

8. Alarm Notification Setting & Email, FTP

- 1) The email configuration screen serves for the preparation of the alarm function. If the motion detect activates your camera is triggered, you will receive an email containing photos. Precondition for this is the correct setup and test of the service. Here the configuration of a Gmail account as example:

Email Setting	
SMTP server:	smtp.gmail.com Server Port 25
Safe link	STARTTLS
Authentication	<input checked="" type="radio"/> On <input type="radio"/> Off
User name	22222222@gmail.com
Password	••••••••
Receiver	11111111@gmail.com
Sender	222222221@gmail.com
Subject	test
Message	ok <small>(the max length is 127)</small>
Test Email settings	Test <small>Please set first, and then test.</small>
	<input type="button" value="Apply"/> <input type="button" value="Cancel"/>

- Device information
- Time set
- Video settings
- Audio Settings
- Record Settings
- Alarm Service Settings
- Email
- FTP
- System Log
- Network Settings
- Wireless
- DDNS Settings
- PTZ set
- Multiple settings
- User Settings
- Maintain
- ONVIF
- Motion detection
- Auto Snap
- Video mask
- Image
- Back

Note: This function only works if the IP camera is connected to the network. If you use Gmail, you must configure the port as 465, SSL as TLS. But the most important is, that you check if your email client has SMTP enabled.

- 2) FTP service is a precondition for the alarm function. If the motion detect activates your camera an email with photos will be submitted to you. For this it is required that you configure the email service correctly in check it for functionality. For example:

FTP	
Server Address	192.168.1.54
Server Port	21
User name	admin
Password	•••
Passive mode	<input checked="" type="radio"/> On <input type="radio"/> Off
Storage Path	/
Test FTP settings	Test Please set first, and then test.

9. System log & Net work setting

1). System log is intended for administrators to monitor the system operation

The screenshot shows a system log window with a list of events. The first event is a warning: "warming: ini file(config_wifiex.ini) not found!!!". Subsequent events show "ipc_server start." and several "user(admin) login for live stream." and "user(admin) logout from live stream." entries. The majority of the log consists of "ircut: display switch" entries with various color and black/white settings. At the bottom of the log area are "Clear Log" and "Refresh" buttons. To the right is a sidebar menu with options like "Device information", "Time set", "Video settings", "Audio Settings", "Record Settings", "Alarm Service Settings", "Email", "FTP", "System Log", "Network Settings", "Wireless", "DDNS Settings", "PTZ set", "Multiple settings", "User Settings", "Maintain", "ONVIF", "Motion detection", "Auto Snap", "Video mask", "Image", and "Back".

2). In "Network Settings" you may modify the IP address, gateway and port number

The screenshot shows the "LAN Settings" configuration page. It includes a table with the following fields and values:

LAN Settings	
IP Configuration Type	Fixed IP Address
IP address	192.168.1.153
Subnet mask	255.255.255.0
Gateway	192.168.1.1
DNS Configuration Type	Manual DNS
Primary DNS	202.96.134.33
Secondary DNS	202.96.128.86
HTTP Port	80 (80 or 1024-49151)
RTSP Port	554 (554 or 1024-49151)
RTSP Permission verify	<input checked="" type="radio"/> On <input type="radio"/> Off (Note:Modify the settings, reboot the device)

At the bottom of the form are "Apply" and "Cancel" buttons. The right sidebar menu is identical to the one in the previous screenshot.

10. DDNS Setting

- 1) Click on the  icon and the choose "DDNS Service Settings".
- 2) Choose the DDNS server, enter the DDNS user name and password.
- 3) Submit, refresh, then the DDNS status will be shown as "DDNS Succeed".

DDNS	
Main DDNS	<input checked="" type="radio"/> On <input type="radio"/> Off
Server Address	<input type="text" value="ipcnp.com"/>
Server Port	<input type="text" value="80"/>
User name	<input type="text" value="d3334"/>
Password	<input type="password" value="*****"/>
3th DDNS	<input checked="" type="radio"/> On <input type="radio"/> Off
Server Provider	<input type="text" value="DynDNS.org"/>
User name	<input type="text" value="myuserid"/>
Password	<input type="password" value="*****"/>
Your Domain	<input type="text" value="mydomain.dyndns.org"/>

14. Auto Snap & Video Mark

1) Capturing of images to the SD card and FTP upload

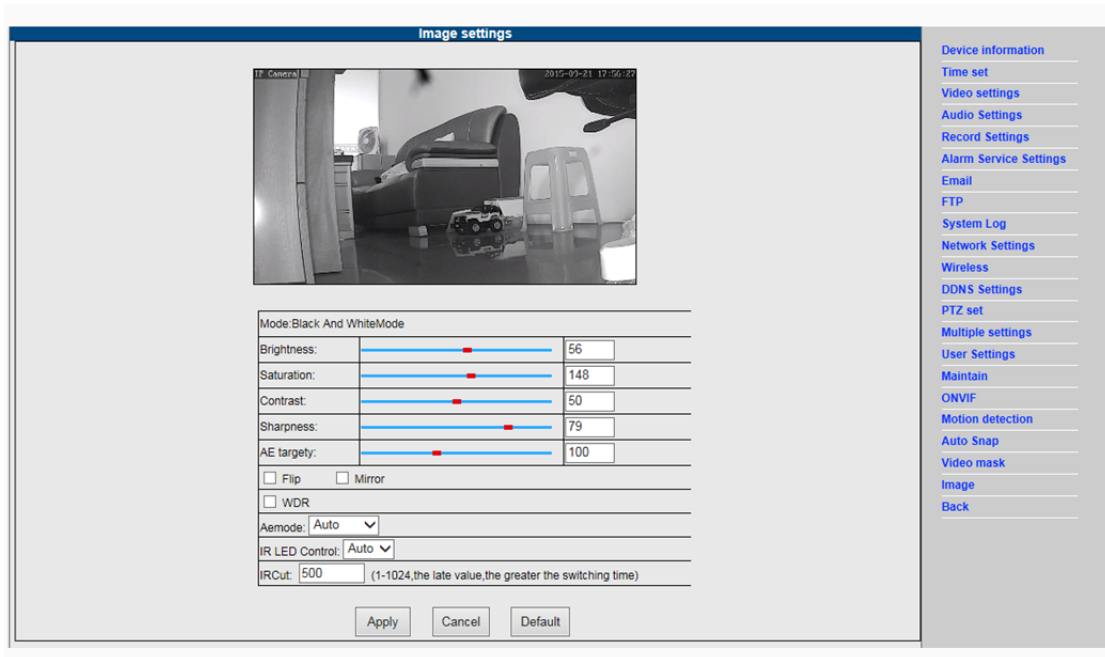

2) Select the screen detail (you can change the size of the window), click on "Apply" and an obscured screen area appears

15. Image setting

- 1) Click on apply to modify the brightness, saturation, sharpness, exposure, contrast
- 2) Click on the application to modify the exposure mode, infrared lamp,
- 3) Click on applications to change the value of the IR-cut
- 4) If you click on "Default" all image settings will restored to the default value

FAQ:

A. Password forgotten

- 1) Reset your camera. While the power is on, you must press the RESET button for 10 seconds. The button you will find at the bottom of the camera. With outdoor cameras the white reset button is located at the end of the power cord.
- 2) After the reset is completed, the camera is reset to the factory settings, then the username and the password is "**admin**".

B. No video, only a black screen, is displayed in the browser

 Note: If there is still no live video after running OCX ActiveX, please try to enable the ActiveX options in the IE security settings by performing the following steps:

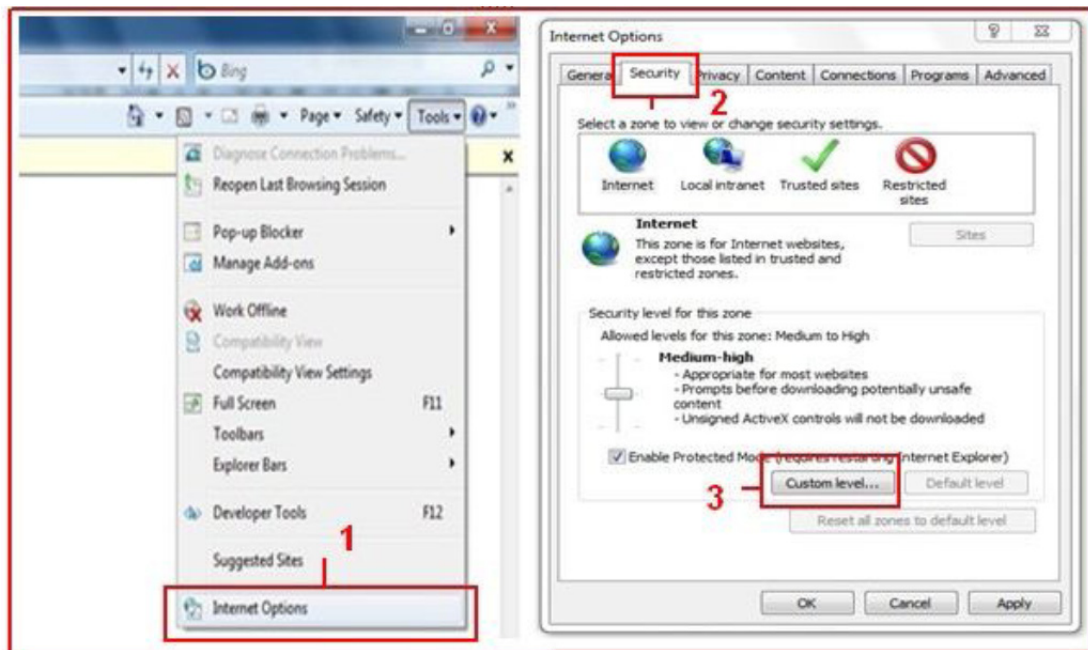

1. Deactivate the firewall of your computer.
2. Change the ActiveX settings in "IE" browser > "Tool" > "Internet Options" > "Security" > "Custom Level" > "ActiveX control and Plug-ins", all ActiveX options should be configured as "Enable":

Especially:

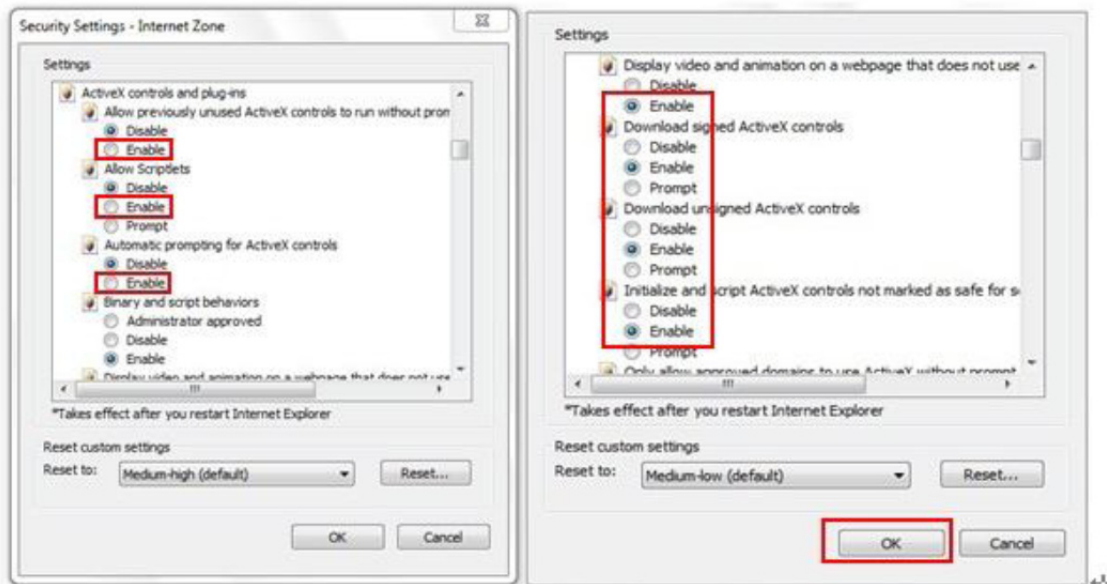

Enable: Download unsigned ActiveX controls

Enable: Initialize and script ActiveX controls not marked as safe

Enable: Run ActiveX controls and plug-ins

Electric and electronic equipment and included batteries contains materials, components and substances that can be hazardous to your health and the environment, if the waste material (discarded electric and electronic equipment and batteries) is not handled correctly.

Electric and electronic equipment and batteries is marked with the crossed out trash can symbol, seen below. This symbol signifies that electric and electronic equipment and batteries should not be disposed of with other household waste, but should be disposed of separately.

As the end user it is important that you submit your used batteries to the appropriate and designated facility. In this manner you make sure that the batteries are recycled in accordance with legislature and will not harm the environment.

All cities have established collection points, where electric and electronic equipment and batteries can either be submitted free of charge at recycling stations and other collection sites, or be collected from the households. Additional information is available at the technical department of your city.
